SerbianCyrLat

This is the git repository of the R package for converting Serbian Latin characters to Serbian Cyrillic and vice versa

The plan is to develop easy way of converting Serbian Latin to Serbian Cyrillic characters.

Description: The package converts Serbian latin characters to Serbian Cyrillic characters and vice versa. It is possible to choose type of conversion as to choose to clone character changes in new variable or to change charactersin place. It is possible to convert strings in character variables and dataframes.

**It is important to use lcl() function to convert locale settings to locale from which you are transliterating!

Look at the function help file and example section **

This package is in the development phase.
